JS Knit Fabric Manufactory

E-CATALOG

Jong Stit Co., Ltd.

is based in Samut Sakhon, Thailand. We are the leading polyester fabric manufacturer, with an annual capacity of 72,000 tons.

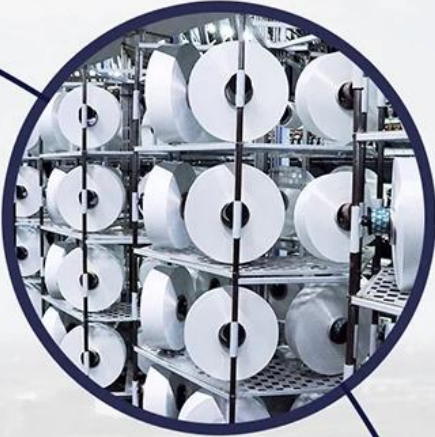

Jong Stit has successfully provided polyester fabric and services while engaging in vertical integration through research and development. The Jong Stit business group includes 3 companies :

Thai Polyester Co., Ltd. (TPC),

Jong Stit Co., Ltd.,

and Fashion Hometex Co. Ltd.

Thai polyester Co., Ltd. (TPC)

manufactures polyester staple fiber, spun yarn, POY, FDY, and DTY yarn. The company can produce 350,000 tons annually. Furthermore, the yarns were provided to Jong Stit Co. Ltd., a polyester fabric manufacturer and supplier which provides a variety of polyester fabric.

JS Fabric manufacturer

We are one division of Jong Stit Co., Ltd.

Fashion Hometex Co. Ltd.

produces blankets and other premium products from fabrics such as pillowcases, 2 in 1 pillow blankets, tote blankets, and many more. Our polyester fabric and finished goods have earned OEKO-TEX standard 100 certification.

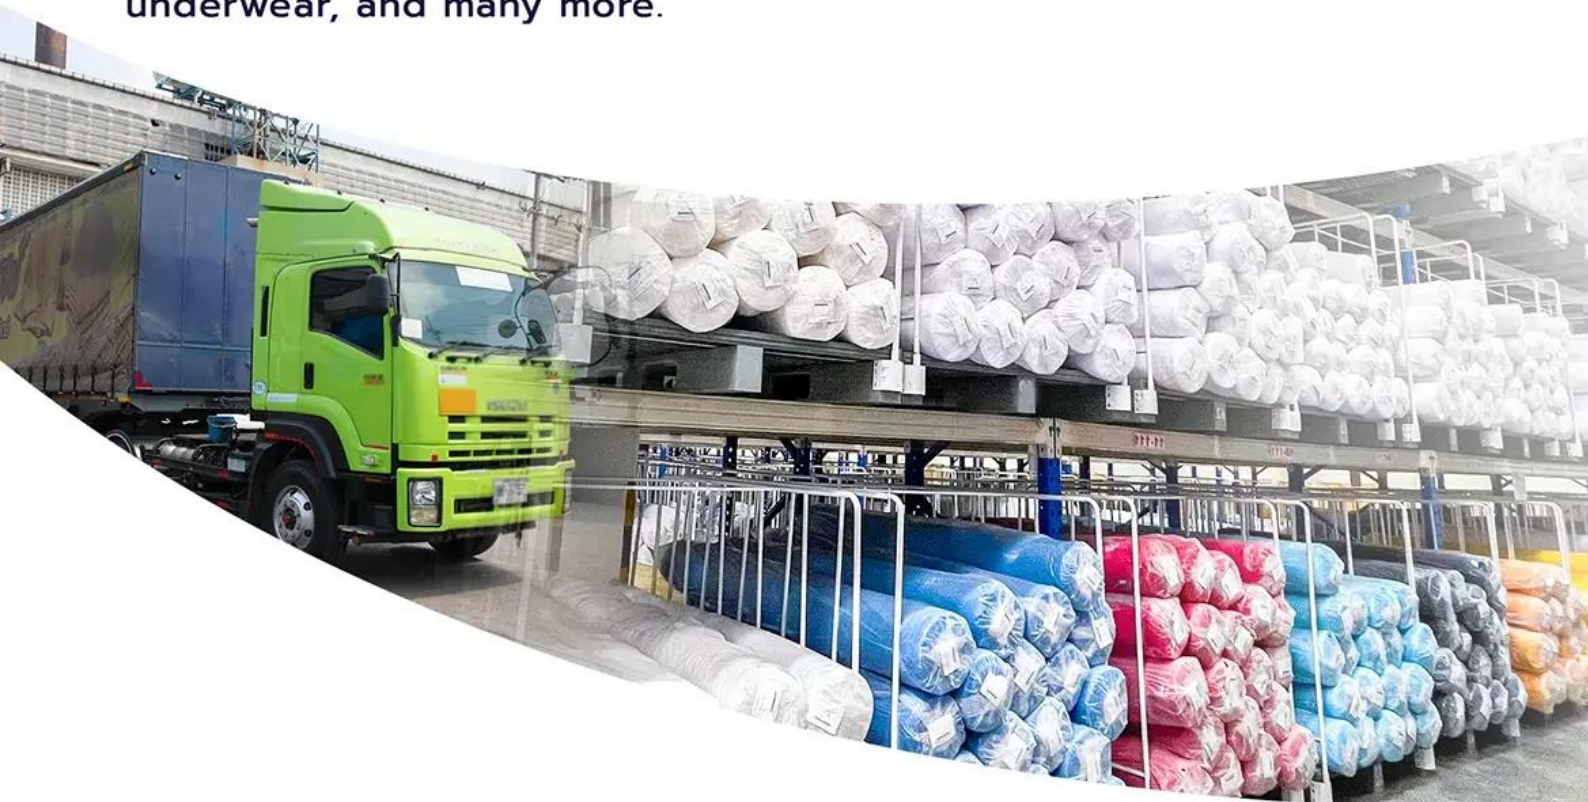

JS Fabric No.1

Polyester Knit Fabric

We are part of Jong Stit Co., Ltd., Thailand's leading polyester fabric manufacturer with over 80 years of experience. We achieve international fabric quality standards. Furthermore, customers from all over the world have placed their trust in us.

Our department specializes in the production of polyester fabrics from circular knitting machine such as french terry, interlock, mesh, single jersey, rib, spandex, and pique fabric.

A wide range of products is suitable for apparel & garment industry. Our fabric usually used for t-shirt, polo shirt, activewear, sportswear, underwear, and many more.

Recycled Fabric

**Giving plastic bottles
a second lift to save
the environment.**

Recycled fabric from plastic bottles can help to reduce single-use plastic waste.

It can be made into a variety of polyester fabrics.

It has the same characteristics and properties as 100% virgin polyester.

INNOVATIONS

*Innovative and functional fabrics
will improve your products.*

Adding a chemical treatment to fabric will prevent bacteria from growing and reproducing. This chemical is not harmful to the skin.

INNOVATIONS

This technology improves the properties of the fabric to prevent water penetration. Water will not easily pass through the fabric surface and will not absorb or penetrate the fabric as lotus leaves do.

03

Stain Release

Stain release finishing is applied to fabric to protect it from tough stains and dirt while also preventing the fabric from retaining its color and staying new. It makes fabric stains easier to remove when washed.

Sweat from the skin is absorbed by the fabric's distinctive cross structure and transferred to the outer surface of clothing.

05

Anti-UV

Adding a chemical treatment to fabric will effectively block UV. The affect will last for some time on the fabric. Before its chemical is thinner, there have been an estimated 15-20 times of washing.
