# Recycled Fabric

## A Plastic Bottle Becomes Fabric

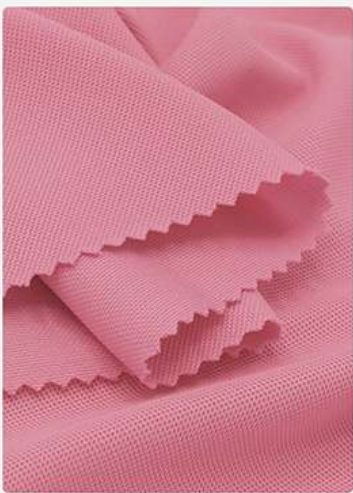

♻️ Recycled fabric is made from PET bottles.

♻️ It can be made into a variety of polyester fabrics.

♻️ It has the same characteristics and properties as 100% virgin polyester.

# INNO VATIONS

*Innovative and functional fabrics  
will improve your products.*

## **Water Repellency**

This technology improves the properties of the fabric to prevent water penetration. Water will not easily pass through the fabric surface and will not absorb or penetrate the fabric as lotus leaves do.

## **Anti-Bacterial**

Adding a chemical treatment to fabric will prevent bacteria from growing and reproducing. This chemical is not harmful to the skin.

### **Anti-UV**

Adding a chemical treatment to fabric will effectively block UV. The affect will last for some time on the fabric. Before its chemical is thinner, there have been an estimated 15-20 times of washing.

### **Cool Quik**

Sweat from the skin is absorbed by the fabric's distinctive cross structure and transferred to the outer surface of clothing.

### **Stain Release**

Stain release finishing is applied to fabric to protect it from tough stains and dirt while also preventing the fabric from retaining its color and staying new. It makes fabric stains easier to remove when washed.
